- New active
- Great value
- Indoors or outdoors

SUMITOMO CHEMICAL

### THE PRODUCT

Sumiguard® contains esfenvalerate, a broad spectrum non selective pyrethroid insecticide.

Sumiguard provides knockdown and residual control of ants, cockroaches, fleas and spiders in domestic, commercial and industrial situations.

### HOW DOES IT WORK?

The active in Sumiguard, esfenvalerate, is a sodium channel modulator. Esfenvalerate works against the insects' nervous system, resulting in repetitive firing of neurons which in turn leads to paralysis and then death.

### EFFICACY

Independent studies have shown that Sumiguard provides excellent knockdown of fleas, cockroaches, ants and spiders as well as providing residual control of up to three months after application for all these pests.

### DIRECTIONS FOR USE

Situation	Pest	Rate	Critical comments
Domestic, commercial and industrial premises	Ants, cockroaches, fleas, spiders	100 mL/5 L water	<p>Apply to floors, skirting boards, carpets, cupboards, behind and below sinks, stoves and drains and other cockroach entry points, particularly cracks and crevices.</p> <p><b>Non-porous surfaces:</b> Apply as a spray at a rate of 5 L/100 m<sup>2</sup> just to the point of runoff.</p> <p><b>Porous surfaces or use through power equipment:</b> Apply as a spray at a rate of 10 L/100 m<sup>2</sup> just to the point of runoff.</p> <p><b>Maintenance treatment:</b> If necessary, repeat treatment at 3 month intervals to prevent re-infestation.</p>

### WHERE CAN IT BE USED?

Sumiguard can be successfully used both indoors and outdoors. Sumiguard gives residual control on carpets or in kitchen cupboards or outside the house.

Sumiguard also has AQIS approval for use in export accredited meat establishments (IOA 11918).

### ACTIVE INGREDIENT

Sumiguard contains 50 g/L esfenvalerate.

### PRESENTATION

Sumiguard is a soluble liquid formulation which means it can be mixed with residual IGR products such as Sumilarv®.

### PERFORMANCE

Sumiguard remains cost effective when compared to similar pyrethrin products on a cost per m<sup>3</sup> basis and can be used alone or with an IGR to provide additional residual control of fleas and cockroaches.

**NOW REGISTERED FOR FLIES, MOSQUITOS, SILVERFISH AND CARPET BEETLES**
